

Steps to follow to integrate your PrestaShop store with Shopylinker

1. Install the module in the PrestaShop store

Shopylinker module installs like any other PrestaShop module

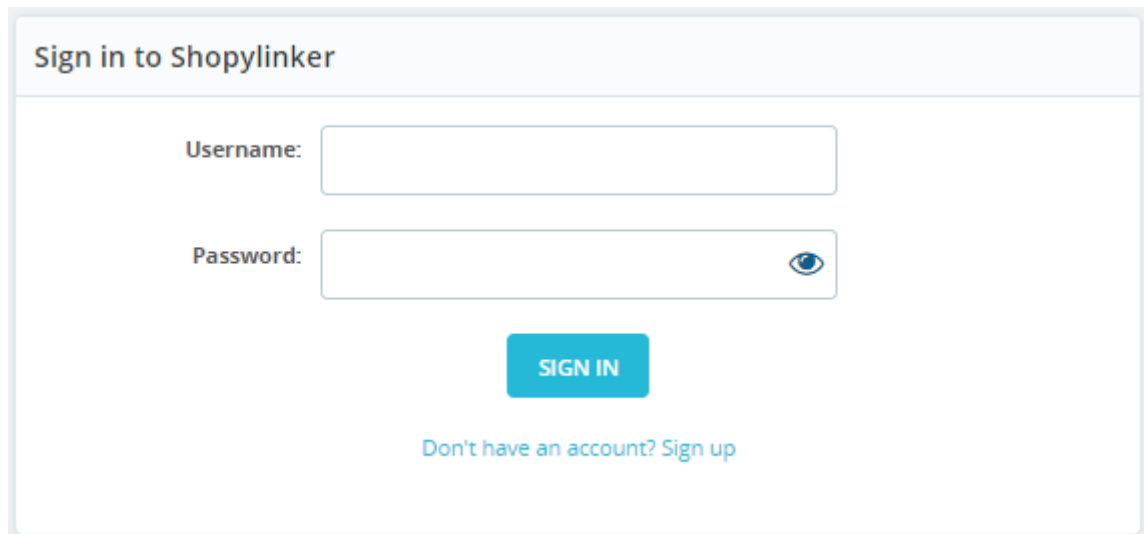

2. PrestaShop store integration with Shopylinker

Once the module is installed in the store, the **Manager** option will appear in the PrestaShop menu within the **Shopylinker** group.

Click on this option to access the integration process of the PrestaShop store with Shopylinker.

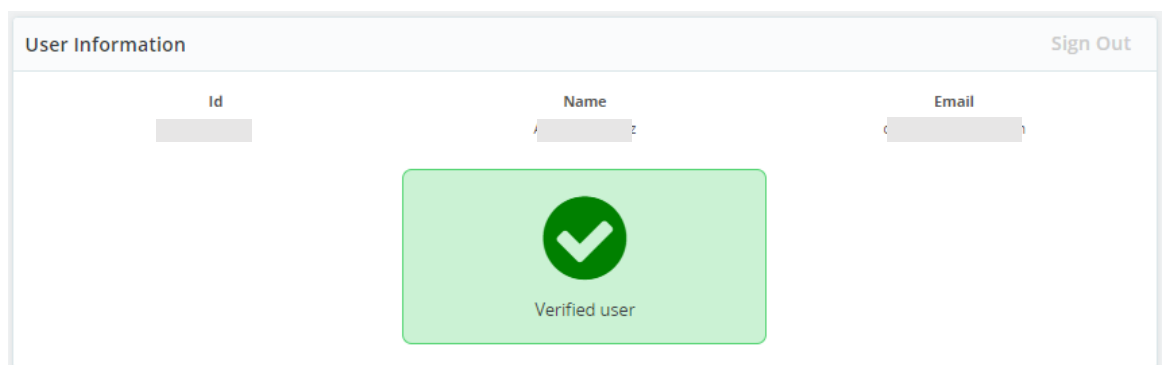

3. After this action, a pop-up window will appear to identify the Shopylinker user:

A sign-in form titled "Sign in to Shopylinker". It contains two input fields: "Username:" and "Password:". The "Password:" field has a toggle icon (an eye) to the right. Below the fields is a blue "SIGN IN" button. At the bottom, there is a link that says "Don't have an account? Sign up".

If you already have an account in Shopylinker you just have to enter your username and password.

In this case, if the data entered is correct, the window will show the following:

A "User Information" window. At the top left is the title "User Information" and at the top right is a "Sign Out" link. Below the title bar are three input fields labeled "Id", "Name", and "Email". In the center of the window is a green rounded rectangle containing a white checkmark icon and the text "Verified user".

Continue with the steps shown in store association

If you do not have a Shopylinker account you can create one from the module by clicking on:

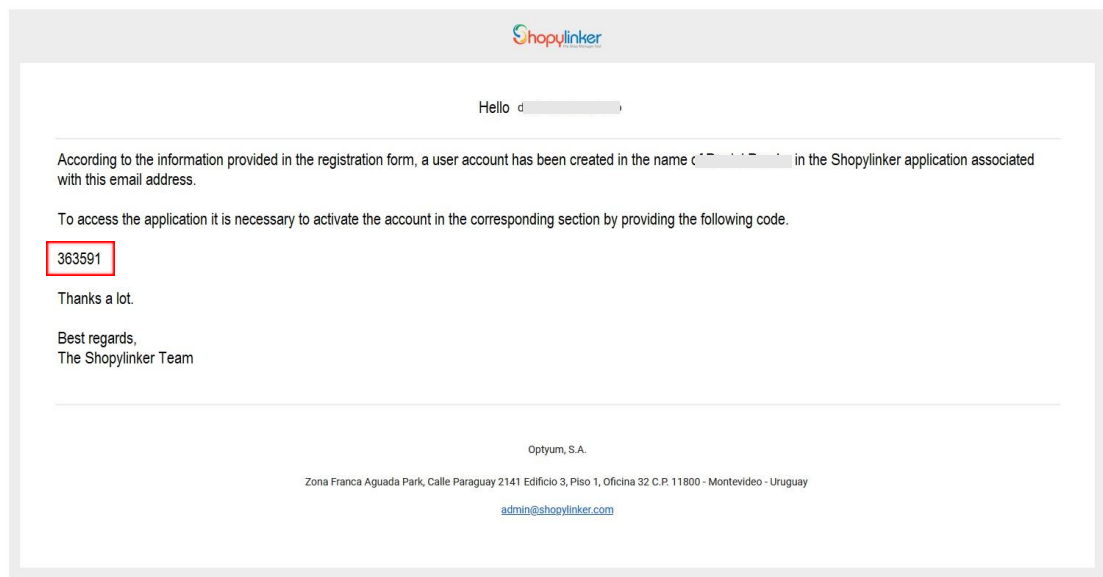

[Don't have an account? Sign up](#)

In this case you must fill in the data that appear in the following image:

In the user information area indicate that the new account created in Shopylinker must be validated, for this you must check the inbox of the email account used for registration in which you should see an email from Shopylinker:

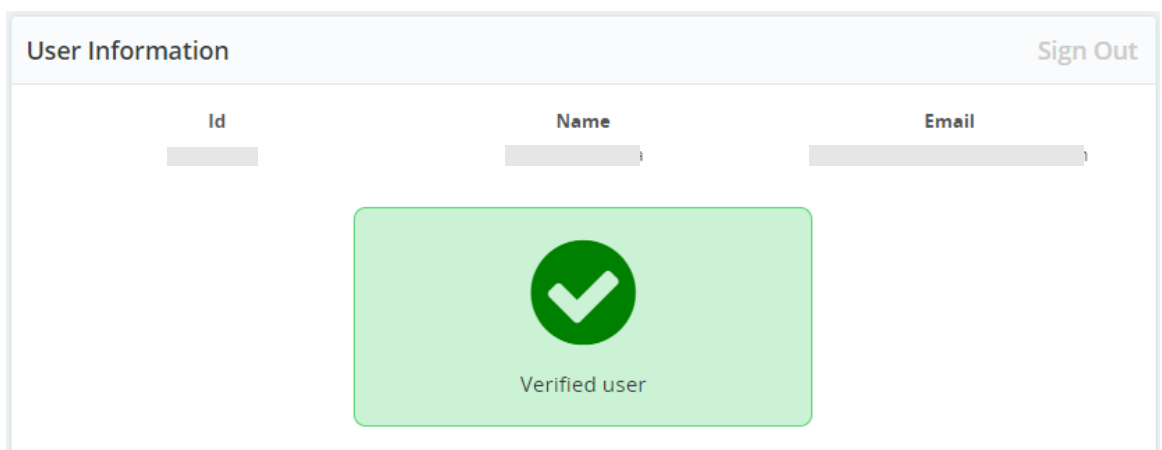

When you open the email you will find a message that includes the activation code of the account:

This is the code you must enter in the account validation field.

Once the code is entered and after pressing the "Validate" button, the user's validation area will change to as shown in the following image:

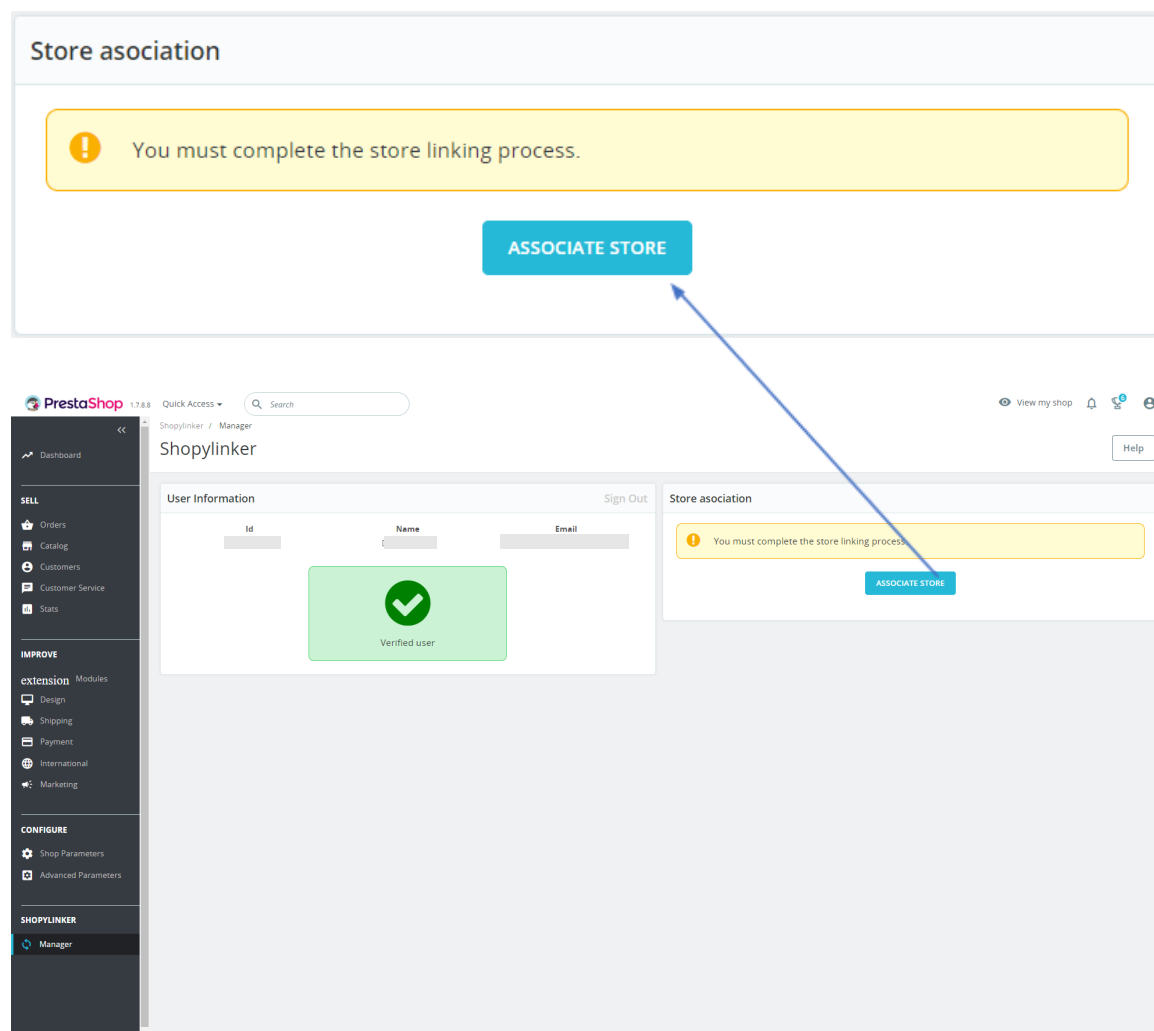

Indicating that the module has verified the Shopylinker user.

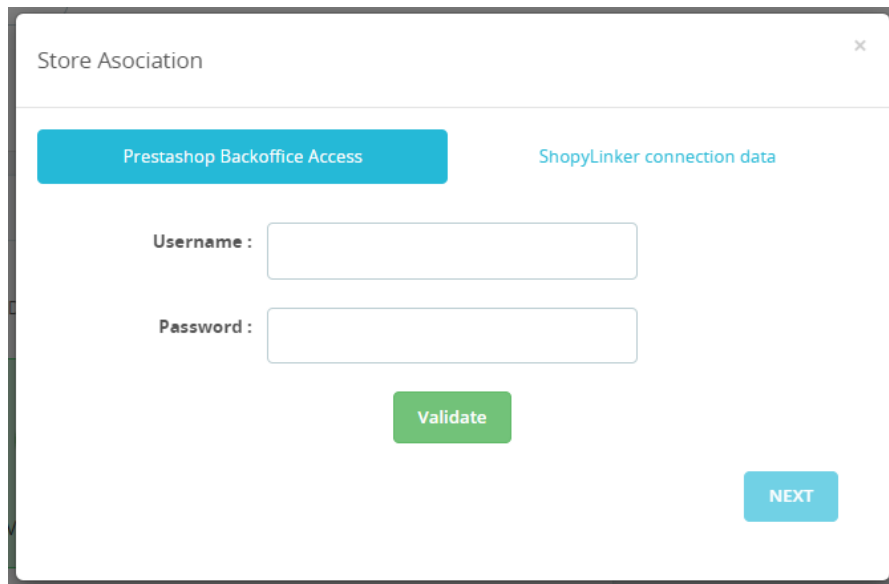

Once the Shopylinker user has been validated, the process of integrating the store with Shopylinker must be carried out.

To do this, you must press the "Associate store" button that appears in the store association area.

Store integration

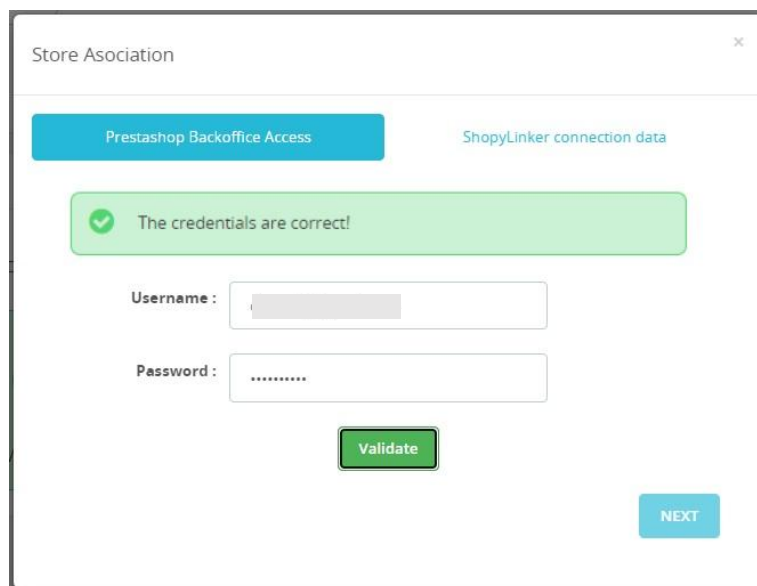

After clicking this button, the following window will appear:

The image shows a 'Store Association' dialog box with a close button (X) in the top right corner. It features two tabs: 'Prestashop Backoffice Access' (active) and 'ShopyLinker connection data'. Under the active tab, there are two input fields: 'Username : ' and 'Password : '. Below these fields is a green 'Validate' button. In the bottom right corner, there is a blue 'NEXT' button.

Important: The user entered in this step must have Administrator privileges in the PrestaShop store

After performing this action if the data entered is correct the pop-up window will show the following:

The image shows the 'Store Association' dialog box after a successful validation. A green message box with a checkmark icon and the text 'The credentials are correct!' is displayed above the input fields. The 'Username : ' and 'Password : ' fields are now filled with greyed-out text. The green 'Validate' button remains, and the blue 'NEXT' button is still present in the bottom right corner.

This indicates that the data entered is correct.

In this step you must click on the "Next" button changing the pop-up screen as shown in the following image:

Shopylinker offers two integration systems for PrestaShop stores:

Proxy Mode Integration

This is the simplest method of integration and the one we recommend. You only need to enter a connection key and click on the "Validate" button.

Important: The connection key must meet the following requirements:

- Minimum 10 characters
- Must include upper and lower case
- Must include at least one number
- You must include any of the following special characters @#\$%

After clicking "Validate" if the connection key meets all the requirements, the pop-up window will show the following information:

Store Association

Prestashop Backoffice Access

ShopyLinker connection data

✓

The code have been saved correctly, you can finish the asociation!

☒ Proxy Mode Integration Configuration.

☐ Direct Mode Integration Configuration.

!

Shopylinker will connect to the store through a proxy hosted in the module. You must set a password for communication between Shopylinker and your store.

Connection key

Validate

BACK

FINISH

Clicking on the "Finish" button will close the pop-up window and the association area of the store will change to what is shown in the following image.

Store asociation

Linking date: 2023-04-19 14:47:11

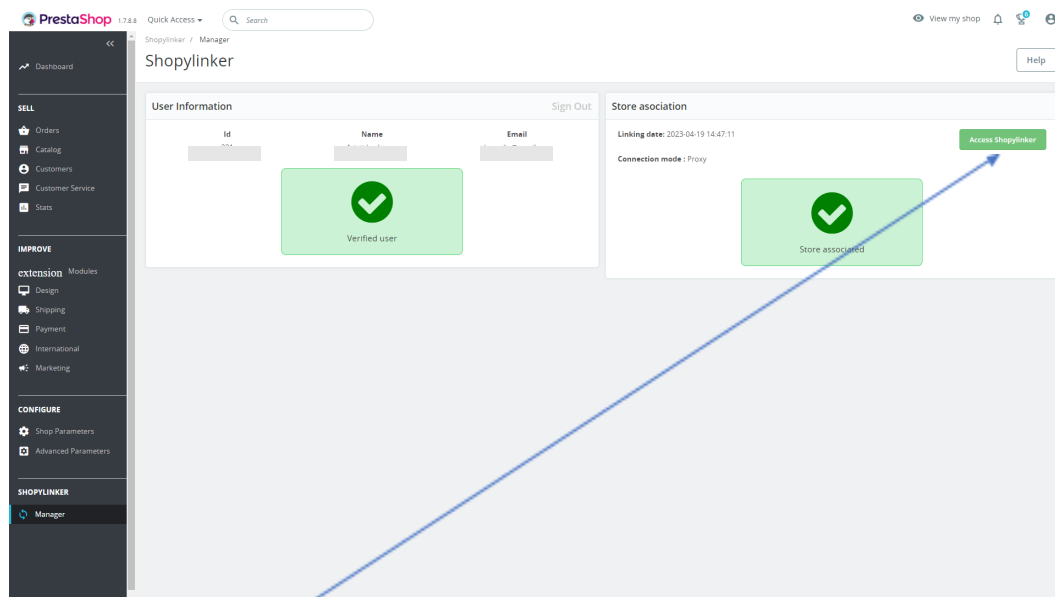

Access Shopylinker

Connection mode : Proxy

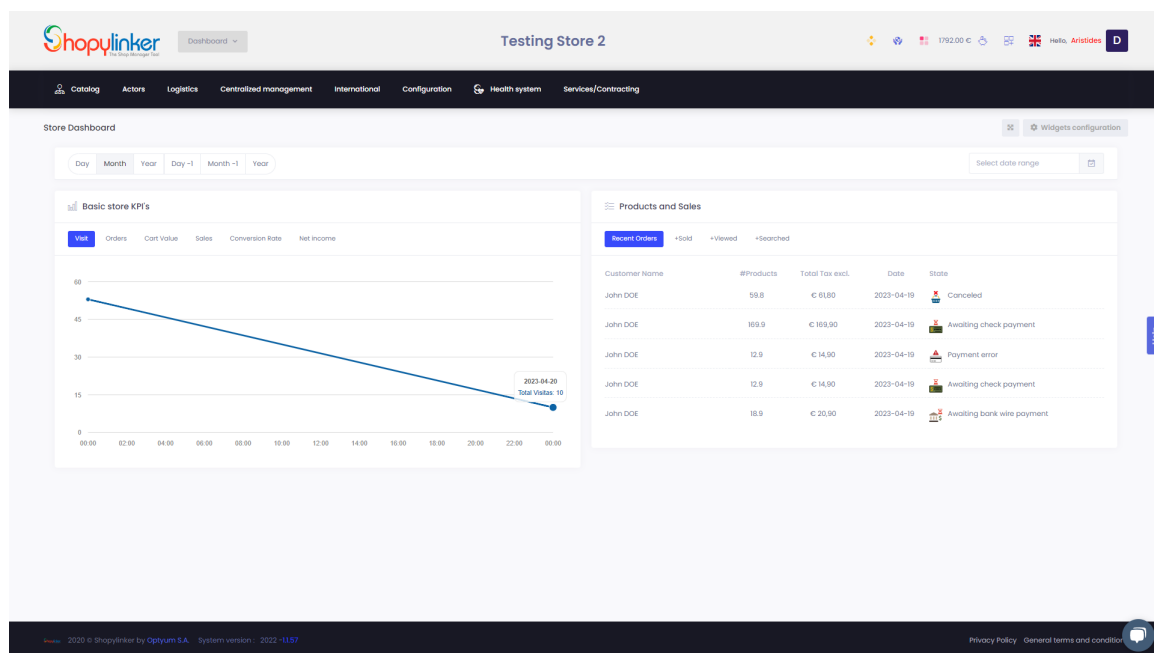

✓

Store associated

Once all these steps are done, the PrestaShop store will be integrated with Shopylinker!!!

Using the "Access Shopylinker" button you can directly access the Shopylinker account.

Using direct mode integration settings

This integration method is more complex and we recommend its use for cases in which due to the configurations of the server that hosts the store it is not possible to make the connection through proxy.

To carry out this integration it is necessary to fill in the data that appear in the following image.

Store Association

Prestashop Backoffice Access

ShopyLinker connection data

☐ Proxy Mode Integration Configuration. ☒ Direct Mode Integration Configuration.

Shopylinker will connect directly to your database and file system. For that it is necessary to provide the accesses. Note that in some cases we propose the accesses that are already configured in the store, but you can change them for the ones you want

Database connection data

Server

Database Name

DB Username *

DB Password

Validate

Ftp connection data

FTP Username

FTP Password

FTP Server

FTP Port

Root folder

Use SSL

☐

Validate

BACK

FINISH

1. Connecting to the database

Database connection data

Server	Database Name
<input type="text"/>	<input type="text"/>
DB Username *	DB Password
<input type="text"/>	<input type="text"/>
<input type="button" value="Validate"/>	

It is generally not necessary to modify the data proposed by the module, press the "Validate" button before moving on to the next section.

2. FTP connection

You must fill in the data on the form

Ftp connection data

FTP Username	FTP Password
<input type="text"/>	<input type="text"/>
FTP Server	FTP Port
<input type="text"/>	<input type="text" value="21"/>
Root folder	Use SSL
<input type="text" value="/"/>	<input type="checkbox"/>
<input type="button" value="Validate"/>	
<input type="button" value="BACK"/>	<input type="button" value="FINISH"/>

Important: The FTP user must have access to the folder in which the store is located.

If you have access to a superior folder, you must indicate the path from the access folder to the root folder of the store in the "Root folder" field.

Clicking on the "Finish" button will close the pop-up window and the association area of the store will change to what is shown in the following image.
